## Part Numbering and Bin Definitions

Bridgelux LED chips are sorted into the brightness and dominant wavelength bins shown below at  $I_f = 350$  mA. Each blue tape contains die from only one brightness bin and one wavelength bin.

The forward voltage bins are 3.2-3.3 V (B1), 3.3-3.4 V (B2), 3.4-3.5 V (C1) and 3.5-3.6 V (C2). The maximum forward voltage ( $V_f \text{ max}$ ) = 3.8 V.

### Notes:

1. Maximum drive current depends on junction temperature, die attach methods/materials, and lifetime requirements of the application.
2. Bridgelux LED chips are Class 1 ESD sensitive.
3. The typical spectra half-width of the BXCD2345 blue power die is < 25 nm.
4. Please consult the Bridgelux technical support team for information on how to optimize the light output of our chips in your package.
5. Brightness values are measured in an integrating sphere using gold plated TO39 headers without encapsulation.
6. Tapes should be stored in a vertical orientation, not horizontally stacked. Stacking of tapes can place excessive pressure on the bond pads of the LED, resulting in reduced wire bonding strength.
